

WATERBORNE PATHOGENS

AquaMedix water filtration systems can help prevent the spread of diseases caused by dangerous waterborne pathogens found in healthcare settings.

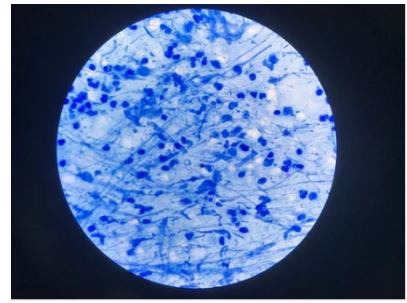

Legionnaires' Disease
Legionella spp.

Pseudomonas pneumonia
and septicemia

Nontuberculous
mycobacterium (NTM)

AquaMedix filters reduce the risk of other common **diseases** such as:

Shigellosis

Typhoid Fever

Dysentery

Cholera

Campylobacteriosis

Cryptosporidiosis

Giardiasis

Acute otitis externa ("swimmer's ear")

Acinetobacter

Burkholderia

Stenotrophomonas

Shiga-toxin producing *Escherichia coli* (STEC) infection O157

Non-O157 STEC infection

Salmonellosis

Vibriosis (including infections caused by *Vibrio alginolyticus*, *parahaemolyticus*, *vulnificus*, and other species)
